PROFESSIONAL SUMMARY

AI engineer with end-to-end experience building agentic AI systems, RAG pipelines, and full-stack backends using LangChain, LangGraph, and FastAPI. Independently shipped a multi-agent legal document analyzer, a campus surveillance platform with automated disciplinary workflows, and multiple voice-driven AI products including a restaurant ordering agent and an e-commerce voice assistant. Also contributed to an SEO automation agency, building Python-based tooling for on-site SEO optimization. Looking for a role where AI systems are built to solve real problems, not just demonstrate concepts.

TECHNICAL SKILLS

AI & LLM: LangChain, LangGraph, RAG, AI Agents, Multi-Agent Systems, Prompt Engineering, ReAct Agents, Semantic Search, Vector Databases

Computer Vision & ML: YOLOv8, Object Detection, Face Recognition, OpenCV, NumPy, Pandas

Backend: Python, FastAPI, SQLAlchemy, Pydantic, JWT Auth, Async Programming, REST APIs, CRUD Development

Databases: PostgreSQL, SQLite, NeonDB, Pinecone, Chroma

Voice AI: Whisper AI, AssemblyAI, ElevenLabs, Cartesia, STT/TTS Pipelines, WebSocket Streaming

Automation: n8n, Slack API, Jira API, Google Analytics API, On-Page SEO, Workflow Automation

Frontend: (*Beginner level*) React, Next.js, TypeScript, Tailwind CSS, Vite, JavaScript, HTML/CSS

Tools: Git, GitHub, LangSmith, Virtual Environments

EXPERIENCE

AI Intern at Revnix (SMC-Pvt) Ltd, Haripur

Nov 2025 – July 2026

- Eliminated manual attendance tracking for a 60-person company, replacing what used to be a full daily task of reading individual Slack messages and entering data by hand with an n8n automation that calculated daily hours (out-time minus in-time) and monthly totals directly into Google Sheets.
- Built a knowledge-scoped RAG customer support agent that kept every answer grounded in verified internal data by combining LangChain, Pinecone vector retrieval, and Tavily Search with custom tool-calling middleware for handling multi-step queries.
- Contributed to FlowSight AI, a company-built execution intelligence platform, by developing the Slack DM notification system and the Jira task-creation pipeline that automatically pulled action items from meeting transcripts using Groq LLM and Slack Block Kit.
- Shipped a 20-endpoint e-commerce REST API with FastAPI and SQLAlchemy, embedded an LLM shopping assistant with conversation memory, and then extended it into a voice shopping agent using Whisper AI, and Cartesia TTS, covering the complete product-search-to-checkout flow by voice.
- Wired Meta's WhatsApp Business API to a locally hosted LLM to deliver a WhatsApp AI agent, and built a restaurant voice ordering pipeline (ElevenLabs speech-to-text into the LLM, then a spoken response) for hands-free order handling.

PROJECTS

AI Campus Surveillance & Automated Disciplinary System *(Final Year Project)* | [GitHub](#)

- Cut the need for a security officer to manually watch every camera by automatically detecting prohibited activities — fighting, smoking, and weapons — across multiple live CCTV feeds using YOLOv8 object detection and Face Recognition; the system saves timestamped evidence snapshots and queues each incident for admin approval rather than requiring constant manual review.
- Delivered the complete platform: FastAPI backend, React/Vite dashboard with role-based access (admin, viewer, student portals), MJPEG/WebSocket live streaming, and an automated challan (fine) PDF generator that creates a uniquely numbered disciplinary record for every approved incident.

Restaurant Voice Ordering Agent | [GitHub](#)

- Built a voice-enabled ordering assistant for a restaurant chain, combining LangChain and LLaMA 3.1 with a Pinecone RAG pipeline (Cohere embeddings) to answer menu, pricing, and location questions grounded in content scraped from the restaurant's own website.
- Added voice input via ElevenLabs speech-to-text, session-based conversation memory in a FastAPI backend, and a custom chat frontend with login, chat history, and quick-action buttons.

LuxStore: E-Commerce Voice AI | [GitHub](#)

- Built LuxStore, a full-stack e-commerce platform with FastAPI and SQLAlchemy, featuring JWT authentication with role-based access, cart and order management, and Stripe/Paddle payment integration.
- Embedded an AI voice shopping agent using LangChain, Groq's Llama 3.3, AssemblyAI speech-to-text, and Cartesia text-to-speech, letting customers browse the catalog and place orders by voice directly in the browser.

ContractLens: Multi-Agent Legal Document Analyzer | [GitHub](#)

- Automated contract review by routing uploaded PDFs, DOCX, and TXT files through four specialized LangGraph agents that parse the document, extract clauses, score risk (0–100 per clause), and generate a plain-English executive summary with negotiation guidance.
- Built an async FastAPI backend with background job polling and LangSmith tracing, paired with a Next.js/TypeScript dashboard showing real-time agent progress and analysis history.

Restaurant Voice Ordering Agent | [GitHub](#)

- Built a voice-enabled ordering assistant for a restaurant chain using LangChain, LLaMA 3.1, and a Pinecone RAG pipeline (Cohere embeddings) with ElevenLabs voice input, served through a FastAPI backend.

YouTube RAG Assistant | [GitHub](#)

- Built a RAG pipeline that answers questions about any YouTube video by retrieving its transcript, embedding it with Cohere, and querying a FAISS vector store through Groq's LLM via LangChain.

EDUCATION

Bachelor of Science in Artificial Intelligence

The University of Haripur | CGPA: 3.06 / 4.0

2022 – 2026

Intermediate (FSC)

Islamia Model College, Timergara | 851 / 1100 (77.4%)

2020 – 2022

Matriculation (SSC)

2018 – 2020

Government Higher Secondary School, Malakand | 820 / 1100 (74.5%)
